Summer Internship Program 2026

Week 2 Assignment

Department: Volunteer Management

Submitted by: Muhammad Taqui

muhammaddtaquichat@gmail.com

Submission Date: July 20, 2026

This report is submitted in fulfilment of the Week 2 deliverable of the Alkhidmat Summer Internship Program 2026, comprising three assignments: understanding yourself, mental well-being and productivity, and career readiness and personal branding.

1 Understanding yourself

1.1 MBTI personality assessment

The assessment was completed at <https://www.16personalities.com>. The result is Mediator (INFP-T). Table 1 shows the five trait scores from the report, and the screenshots below show the result as returned by the platform.

Table 1: Personality trait breakdown, 16Personalities assessment

Trait	Result
Energy	97% Introverted
Mind	63% Intuitive
Nature	59% Feeling
Tactics	74% Prospecting
Identity	94% Turbulent

Figure 1: Personality type result: Mediator (INFP-T).

1.2 Reflection

The result of the assessment is Mediator (INFP-T): an introverted, intuitive, feeling, prospecting personality type with a turbulent identity. This generally means I prefer working independently, enjoy exploring new ideas, make decisions based on personal values, and reflect before acting. I also tend to be self-critical, which pushes me to improve but can tip into overthinking.

Three strengths from the assessment match my own experience. First, I listen well and pick up on how people are feeling, which is directly useful in the Volunteer Management department at Alkhidmat, where understanding volunteers' concerns is central to the work. Second, I learn independently: beyond university coursework, I maintain my GitHub portfolio under iTaqiZ, work through self-directed

Figure 3: Strengths, as returned across the three assessment domains.

certification tracks in data science and AI, and continue building NeuroNova, an open AI and data science curriculum, none of which was ever a requirement. Third, I stay with long-term goals even when progress is slow, whether that is a project, a certification track, or an internship application, rather than dropping it at the first setback.

Two areas need real improvement. The first is structure and follow-through: I regularly make to-do lists and study plans, but do not always work through them as intended. The second is hesitation to advocate for myself. I complete projects I am reasonably proud of but often delay sharing them, which has kept my own online presence smaller than the work behind it would justify.

Understanding these patterns gives me a clearer sense of what to work on. Technical skill alone will not carry a career in AI and data science; discipline, confidence, and the willingness to be visible matter just as much. This internship is itself a useful test of that: Volunteer Management work draws on the same listening strength named above, while the weekly reporting structure depends on exactly the consistency I still need to build. Building on what already works while deliberately addressing what

Your Weaknesses

- ❗ **Self-Critical Thoughts**
You easily overlook your achievements, becoming discouraged by perceived shortcomings.
- ❗ **Difficulty Setting Boundaries**
Your compassionate nature may lead you to exhaust yourself accommodating others' needs.
- ❗ **Avoidance of Routine**
Consistency and structured habits do not come naturally, making disciplined goals challenging.
- ❗ **Hesitance to Take Action**
Endless internal deliberation often delays practical steps toward your personal objectives.
- ❗ **Hard to Move Past Regrets**
Past mistakes linger emotionally, making it tough to forgive yourself and move forward.
- ❗ **Sensitive to External Opinions**
You may unintentionally give too much weight to others' judgments when assessing yourself.

(a) Personal growth

Your Weaknesses

- ❗ **Struggling with Pragmatism**
Your idealistic expectations may hinder practical decision-making and achievable goals.
- ❗ **Difficulty Networking**
Self-promotion and professional interactions outside your comfort zone may leave you drained.
- ❗ **Reacting Personally to Criticism**
Constructive feedback may trigger deep self-doubt, negatively affecting your confidence.
- ❗ **Overlooking Organization**
Your spontaneous workflow style can cause difficulties in maintaining schedules and routines.
- ❗ **Reluctant to Advocate**
Your natural humility often prevents you from presenting your contributions effectively.
- ❗ **Drained by Routine**
Repetitive or structured tasks demotivate and tire you, reducing overall productivity.

(b) Career path

Your Weaknesses

- ❗ **Avoiding Conflict**
You may leave difficulties unaddressed, sacrificing honesty to maintain peace and harmony.
- ❗ **Idealizing Connections**
You sometimes hold relationships to unrealistic standards, causing disappointment and distancing.
- ❗ **Neglecting Your Needs**
You frequently neglect to communicate your own emotional requirements clearly.
- ❗ **Withdrawal Under Stress**
Emotional overwhelm can lead you to distance yourself, unintentionally hurting loved ones.
- ❗ **Insecurity in New Situations**
You may appear withdrawn in unfamiliar social settings, limiting relationship opportunities.
- ❗ **Sensitive to Rejection**
Being misunderstood or dismissed quickly discourages you from initiating or maintaining relationships.

(c) Relationships

Figure 4: Growth areas, as returned across the three assessment domains.

Your introspective nature drives you to continually explore your own thoughts, feelings, and values. This self-awareness is a powerful tool for personal growth, but it can also lead to excessive self-criticism. You're highly attuned to criticism from others as well, which can sometimes leave you feeling vulnerable or misunderstood.

Despite these challenges, your unwavering commitment to your ideals and your ability to see the best in others make you a powerful force for good in the world. Your journey is one of balancing your rich inner life with the demands of the external world, always striving to bring more beauty, kindness, and authenticity into your life and the lives of those around you.

2 Your Career Path

(a) Career path

3 Your Personal Growth

For you, personal growth is an ongoing journey of self-discovery and authenticity. You're constantly seeking to understand yourself better and to align your actions with your deeply held values. This process of introspection and self-improvement is both rewarding and challenging, as you explore the complexities of your rich emotional world.

Your path to growth often involves learning to balance your idealism with practicality, and developing the resilience to face life's inevitable disappointments. While your empathy and imagination are great strengths, learning to set

(b) Personal growth

4 Your Relationships

In relationships, you seek deep, meaningful connections that honor your need for authenticity and personal growth. Your empathy and intuitive understanding of others make you a compassionate friend and partner, capable of forming bonds that go beyond surface-level interactions. You have a gift for creating safe spaces where others feel understood and accepted.

However, your idealistic nature can sometimes lead to challenges in relationships. You may struggle with conflict or become disappointed when others don't live up to your high expectations. Learning to communicate your needs effectively, set healthy boundaries, and accept others (and yourself) as imperfect

(c) Relationships

idealism. Your compassionate nature and deep-seated desire to understand the human experience make you a natural confidant and source of support for those around you. You approach life with a sense of wonder, always seeking meaning and authenticity in your experiences and relationships.

Your creativity is a wellspring of inspiration, often manifesting in unique ideas and innovative solutions to complex problems. However, this same creativity can sometimes lead you to become lost in daydreams, making it challenging to handle the more practical aspects of life. You have a profound capacity for empathy, allowing you to connect with others on a deep, almost intuitive level.

(d) Closing summary

Figure 5: Supporting detail from the full assessment report.

holds me back should make me a more effective learner, professional, and volunteer.

2 Mental well-being and productivity

2.1 Two-day digital detox challenge

The following checklist was completed over two consecutive days as part of the challenge.

- ✓ No phone during meals
- ✓ No phone for 30 minutes after waking up
- ✓ Unnecessary notifications turned off
- ✓ Phone kept away during study or work
- ✓ 10 pages of a book read daily
- ✓ No phone for one hour before sleeping

2.2 Reflection

The two-day digital detox challenge was completed following the checklist above. The hardest stretch was the phone-free period right after waking, which felt slow and, at first, simply boring without the usual habit of reaching for a phone. That difficulty eased as the two days went on. Focus during the day showed a small but real improvement, though not a dramatic one. The single most beneficial change on the list was the no-phone period after waking: of everything attempted, that was the one that made the most noticeable difference by the end of the two days.

3 Career readiness and personal branding

AI and digital footprints on employment

3.1 Introduction

Hiring now runs through two filters that barely existed a decade ago: a search of the candidate's public online presence, and, increasingly, an AI system that scores or ranks the candidate before anyone reads the application by hand. Employability is no longer decided by a resume and an interview alone. It is shaped, in part, by whatever a name search or an automated screening tool turns up.

3.2 Employer screening of digital footprints

Checking a candidate's social media before hiring has moved from an occasional practice to a standard part of screening. A Society for Human Resource Management survey found that around 43 percent of US employers examined candidates' social media profiles as part of hiring.¹ By 2023, a ResumeBuilder survey put the figure at 73 percent of hiring managers using social media to evaluate applicants, mainly to confirm cultural fit and verify details on the application; 85 percent of those managers said they had rejected a candidate because of something found online.² The exact percentage varies across surveys and years, but the direction is consistent: employers increasingly treat a candidate's digital footprint as a routine part of vetting, alongside the resume itself. The same screening cuts both ways: employers also report extending offers on the strength of a positive online impression, citing a professional image, clear communication, or well-rounded interests noticed during a search, rather than treating the check as purely a filter for red flags.³

3.3 AI-driven resume and candidate screening

Applicant tracking systems have shifted from simple resume databases to AI-driven screening tools. Modern systems use semantic analysis rather than plain keyword matching, so the software can recognise that "Python scripting" experience is relevant to a role asking for "automation development" without an exact word match.⁴ One industry analysis attributes to Gartner a projection that 75 percent of companies will use AI-powered recruitment tools by 2026, and cites Deloitte research finding a 40 percent improvement in hiring efficiency among companies using AI in talent acquisition; both figures are drawn from that secondary source rather than the original reports.⁵ In practice, this means a resume is frequently read, scored, and ranked by software before a recruiter opens it, and a candidate's broader online presence can factor into that scoring alongside the document itself.

⁵Ibid.

3.4 Regulatory response

This shift has drawn regulatory attention. New York City's Local Law 144, enforced since July 2023, requires employers using an automated employment decision tool to have it independently audited for bias each year, publish a summary of that audit, and give candidates at least ten business days' notice before the tool is used; penalties run from 500 to 1,500 dollars per violation.⁶ The EU AI Act, in force since August 2024, goes further, classifying AI systems used in recruitment, screening, hiring, promotion, and termination as high-risk under Annex III, and requiring a conformity assessment plus ongoing monitoring, with penalties of up to 35 million euros or 7 percent of global turnover for the most serious breaches.⁷ Neither law guarantees a human reviewer for a rejected application, and neither has a direct equivalent yet in Pakistan or most of South Asia, but both signal that regulators now treat AI-driven hiring decisions as consequential enough to require oversight rather than as a neutral efficiency tool.

3.5 Managing a digital footprint

For a job seeker, the practical implication is that a digital footprint now functions as an informal second application running alongside the formal one. Career advisers commonly recommend a basic self-audit: searching one's own name in a private browser window to see what a recruiter would see, checking privacy settings on personal accounts, and keeping a consistent professional image across platforms.⁸ For a technical candidate specifically, this typically means an active, well-maintained LinkedIn profile alongside a visible portfolio of projects, since recruiters increasingly expect to verify a candidate's claims independently of the resume, and use portfolio material such as completed projects and demonstrated skills as positive signals rather than only screening for red flags.⁹

3.6 Conclusion

None of this replaces the fundamentals of career readiness: relevant skills, a clear resume, and the ability to perform in an interview. But those fundamentals are no longer evaluated in isolation. Between a recruiter's own search and an AI system's screening, a candidate's online presence has become a working part of the hiring process, one that rewards a small amount of deliberate maintenance and penalises neglect.
